TUGAS	3
Finding the Longest Word	
2. Finding missing Items	
3. Previous Source Code	
4. Sum Integer in Linked List	

TUGAS

1. Finding the Longest Word

```
def find_longest_word(sentence):
    """
    Find the longest word in the given sentence.
    """
    # Mengembalikan pesan berupa kata terpanjang yang
dapat dengan
    # Mencari kata terpanjang dalam kalimat yang
diberikan
    # Dengan cara membagi kalimat menjadi kata-kata
    # Dan kemudian mencari kata terpanjang berdasarkan
panjangnya
    return f"The longest word is: {max(sentence.split(),
key=len)}"

print(find_longest_word('I love to learn python'))
print("\nProgram Completed!\n\n--- By L200220277 ---")
```

```
010709-algoritma-dan-struktur-data on  main
) py .\240313-array\assignments\longest.py
The longest word is: python

Program Completed!
--- By L200220277 ---
```

2. Finding missing Items

```
def find_missing_number(numbers_list):
    """
    Find the missing number in the given array of
numbers between 1 and 10.
    """
    # Mendefinisikan variabel missing_number
    # untuk menyimpan angka yang hilang
    missing_number = 0
    # Melakukan perulangan dari angka dari 1 sampai 10
    for number in range(1, 11):
        # Memeriksa jika angka pada jangkauan diatas
        # tidak ada pada numbers_list
        # maka missing_number diisi dengan angka
tersebut
    if number not in numbers list:
```

```
missing_number = number
  # Mengembalikan pesan serta angka yang hilang
  return f"The Missing Number is:
{str(missing_number)}"

print(find_missing_number([1, 2, 3, 4, 5, 6, 8, 9, 10]))
print("\nProgram Completed!\n\n--- By L200220277 ---")
```

3. Previous Source Code

```
